

**Abstract of the Disclosure**

A sanitary bag having an outlet tube, the bag adapted to be sanitarily filled with water by an end-user of the bag, and an insulated container to hold the bag in a  
5 location remote from a water-filling location, the container including a spigot, wherein the outlet tube of the bag extends through the spigot. A method including attaching an input member from a sanitary water supply to an inlet of a bag in a substantially sealed configuration, filling the flexible bag with water, removing the input member from the inlet without allowing any contaminants to reach the water,  
10 and placing the flexible bag within a portable insulated container for use at a location remote from the filling location.
